Water Bill - Seasonal Tips

As temperatures rise and outdoor water use increases, a few simple steps can help manage your water consumption.

Take a water-smart approach to spring cleaning

Use a bucket instead of a running hose for outdoor cleaning. Sweep driveways and patios first, then rinse only when necessary.

Be mindful when filling pools and hot tubs

Filling large volumes of water can significantly increase your bill. Spread filling over time if possible, and use a cover to reduce evaporation.

Water lawns and gardens wisely

Water early in the morning or later in the evening to reduce evaporation. Only water when needed, and consider using a rain barrel to collect water. If using a sprinkler system, adjust sprinklers so water lands on your lawn and not on driveways or sidewalks and use timers to avoid overwatering.

Check for leaks after the winter thaw

Cold weather can cause pipes, outdoor taps, and irrigation lines to crack or shift. Inspect for drips, pooling water, or unexplained usage.
